

Making Term2 the Term01 server

****Support Notice** - Reconfiguration of the terminal should be handled by a Level 2+ Tech

Here are steps to making Term02 into 1 and making the original Term01 into Term02.

1. Connect to Term01 and change the IP address to free up the server IP to allow T2 to take that IP
2. Unregister onePOS Service
 - Stop onepos server in services
 - Open Run
 - Type cmd hit Enter
 - In Command Prompt type cd\onepos\exes and hit Enter
 - Type oneposserver.exe /u
 - Alternate
 - CD\Windows\System32\
 - SC Delete "onePOS Server"
3. Remove onePOS from Registry
 - Open Run
 - Type Regedit
 - Navigate to HKEY_LOCAL_MACHINE\SOFTWARE\WOW6432Node\
 - Delete the onePOS Key
4. Rename onePOS folder to onePOSold to keep in tact to be able to pull files if needed(Do not want replicator to change the onePOS folder)
5. On Term02 Either copy onePOS folder from T1 to T2 or rely on replicated onePOS folder. Check for current journals, tabs, timeclock. If not current pull from T1 onePOSold.
6. On Term02 Set IP address to the server IP.
7. On Term02 Run Configterminal.exe and run it and set to Term01.
8. Reboot
 - Should come up as Term01 and 3 and up should now be up and running as well

9. On original term01 go onePOSold\Install
10. Run congifterminal.exe and run it and set to Term02
11. Reboot
12. Term should come up as Term02
13. IMPORTANT!! Check replicator after a few minutes and make sure replicator starts.
14. Leave the onePOSold folder
